Introduction

I'm a designer with interests in product and interaction. Over the last year, I've been learning UI/UX design through online courses and reading UX books.

My interest was piqued after reading a design essential, and how UI/UX has a balance of both structure and creativity. This led to my transition from dentistry to design.

Design process

Currently, I am working on concept projects and using the following design process for those.

- Analyse and discover user problems
- Draw user flows
- With these userflows I sketch wireframes
- Convert wireframes into UI on Figma
- Setting goals metrics and next steps

An interesting project I've worked on was on Google Pay's post payment experience, you can read more about that on my portfolio.

Skills

- Wireframing and user flows
- UI design in Figma and Sketch
- Basic understanding of HTML/CSS

Education

Bachelor of Dental Surgery
2012 - 17, Bharati Vidyapeeth

Udemy design courses

Design rules: principles + practices
for great UI design

Complete app design: UI/UX and
design thinking
